Lubertus Berrens : Science Friction...Grins and Groans Among the Titles of Scientific Studies: A Selection of Captions from the Biomedical Literature before purchasing it in order to gage whether or not it would be worth my time, and all praised Science Friction...Grins and Groans Among the Titles of Scientific Studies: A Selection of Captions from the Biomedical Literature:

That science is not always an entirely serious matter is demonstrated by this compilation of witty and thought-provoking titles from the biomedical literature. Professor Berrens' perusal of article titles in many medical databases has brought to light numerous examples of intentional or unintentional puns, and apparently absent-minded or narrow-minded goofs. The work is illustrated with cartoons. It sets out to provide a little light relief for all those working in science, and to remind them perhaps to think twice before deciding on a title for their latest work.
