Richard Robinson : Science Magic in the Bedroom: Amazing Tricks with Ordinary Stuff before purchasing it in order to gauge whether or not it would be worth my time, and all praised Science Magic in the Bedroom: Amazing Tricks with Ordinary Stuff:

From now on, the only eye rubbing you'll do will be a result of the dazzling magical illusions you create right in your own bedroom... Start your own thunderstorm, inside! Become a master of illusion! Discover how to make a bird

appear out of thin air! Command your audience's hair to stand straight up!

From School Library Journal Grade 4-7 An introduction to optical illusions and other tricks to fool the senses, especially touch and hearing. Basic information about human physiology, such as the blind spot in the eye or the placement of nerve endings in the fingers, is included. The author ties the eyes adjusting to the dark or the "settling" of a house at night into the bedroom theme. Other tricks involve the use of static electricity and the properties of air and heat. Black-and-white cartoons serve instructional purposes and heighten the fun of the text. Most of the tricks are easy to perform with common items such as paper, balloons, and a sock. Not unusual, but fun. -Kathryn Kosiorek, Cuyahoga County Public Library, Brooklyn, OH Copyright 2002 Reed Business Information, Inc.
